-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

Claim 6 is withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 1 March 2005.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 4, 5, and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Phelps (US 4,531,404). Phelps discloses the claimed invention, a chamber for containing a consolidated porous media comprising containment cylinder [10,12,38] closed at each end, fluid inlet/outlet [11,13] through either of the closed ends, rubber liner [24] closing the ends of the containment cylinder around the inlet/outlet and covering the top/bottom sides of the containment cylinder; loading ring [18,20] comprising inlet/outlet [26,28], and means [14] compressing and locking the pressure on the sample. Note that the recitation of lithostatic pressure is met by the disclosure, and that any specific ranges of lithostatic pressure representative of deep environments are not claimed. A process of providing the above chamber, compressing the parts to form

the structure of Figure 1, and passing fluid through is disclosed (see abstract). Note that rotor structure is not claimed in claim 1.

Allowable Subject Matter

Claims 3 and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims; since the prior art neither discloses nor fairly teaches the process of using the claimed structure in a centrifuge or heating the enclosed sample to a temperature natural to its native environment.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Gupta (US 4,495,795), Kelton (US 2,713,789), Haines (US 5,563,333), Sarem (US 3,023,606), Leas (US 2,534,718), Jones (US 4,649,737), Unalmiser (US 5,442,950), and Maini (US 5,719,327).
